

Turtle-WoW / Tortoise-WoW Extended - Master Command Reference & Architecture Guide

This document is the canonical CLI operational reference and architecture guide for **Tortoise-WoW Extended** ([twow project/tortoise-wow](#)), unifying upstream VMaNGOS bugfix porting, native Turtle-WoW core restoration, deterministic bug proving, isolated worktree builds, multi-factor priority ranking, database safety auditing, and release lifecycle management.

TIP

Universal Terminal Invocation All commands can be executed from any terminal, PowerShell console, shortcut, or CI runner without changing current directory: `""powershell & "C:\Users\Admin\AntigravityProfiles\Projects\twow project\tools\task.ps1" <command> [arguments] [options] ""` Or via standard command prompt: `""cmd powershell.exe -ExecutionPolicy Bypass -File "C:\Users\Admin\AntigravityProfiles\Projects\twow project\tools\task.ps1" <command> [arguments] [options] ""`

1. Overview & Operational Principles

The Tortoise-WoW porting system bridges upstream vanilla bugfixes ([vmangos/core](#)) with the customized Turtle-WoW 1.12.1/1.18.1 server core ([Ildourol/tortoise-wow-extended](#)).

Fundamental Engineering Invariants:

1. **Deterministic-First Authority:** Heuristics classify; deterministic engines prove; AI assists on ambiguity but NEVER acts as the sole validation gate.
2. **Standardized Exit Codes:**
- 0 : PASS (Operation completed successfully and verified).
 - 1 : VALIDATION / COMPATIBILITY FAILURE (Invariant violated, collision, or check failed).
 - 2 : TOOL / ENVIRONMENT FAILURE (Missing binary, invalid repo, git error).
 - 3 : INTERNAL / SCHEMA FAILURE (Malformed contract, schema validation failure).
3. **Strict Worktree Isolation:** All candidate patches and build checks execute exclusively in dedicated Git worktrees (`.worktrees/PORT-XXXX/`). The user's primary working tree is never touched, reset, or dirtied.
4. **No Destructive Rollbacks:** `git checkout .`, `git reset --hard`, and `git clean -fd` are strictly prohibited on the target repository.
5. **No Production Database Direct Writes:** Audits analyze SQL migrations offline against cached catalog schemas (`config/schema_catalog.json`).
6. **Compile and Link Do Not Imply Startup:** Server health verifies compile, link, and startup/smoke milestones separately.
7. **Single-Writer Constraint:** Compilations through MSVC 2022 / Ninja acquire single-writer synchronization to prevent compiler file locking and git index corruption.

2. Architecture & Pipeline Flow

The orchestration architecture consists of three interconnected subsystems feeding through canonical state stores:

3. Workflow Lifecycle of a Candidate Fix

4. Master Command Reference: Core Automation Commands

Command	Full Syntax	Mode	Access	AI Usage	Build Usage	DB Usage	Description	Migration Audit	Unified porting pipeline for upstream donor commits.
task auto-pilot	task.ps1 auto-pilot [N] [-Tier 1-5] [-Mode M]	Variable	Write (Worktree)	Advisory	Full MSVC	Migration Audit	One-command autonomous batch port & commit for \$N\$ commits (default workflow).		
task auto-port	task.ps1 auto-port <sha> [-Mode M] [-DryRun]	Variable	Write (Worktree)	Advisory	Full MSVC	Migration Audit	One-command end-to-end port & commit for a single commit.		
task port	`task.ps1 port <sha> [-Mode Fast\`	Normal\`	Deep] [-DryRun] [-AutoCommit]`	Variable	Write (Worktree)	Advisory	Patch-Aware		
task port-batch	task.ps1 port-batch <N> [-Tier 1-5] [-Mode M] [-DryRun] [-AutoCommit]	Variable	Write (Worktree)	Advisory	Patch-Aware	Migration Audit	Batch executes porting pipeline on next \$N\$ curated candidate commits.		
task build	task.ps1 build <profile>	Fast/Deep	Execute	None	Full MSVC	None	Builds server profile (world , auth , sql-only , playerbots).		
task build-packages	task.ps1 build-packages	Normal	Write (Worktree)	None	Full MSVC	Offline Audit	Compiles, verifies, and commits all staged PORT-XXXX and CORE-XXXX packages in worktree.		
task 2	task.ps1 2 <sha/topic>	Fast	Read-only	None	None	None	Searches 22,155 indexed forum threads for bug discussions and mechanics lore.		

Command	Full Syntax	Mode	Access	AI Usage	Build Usage	DB Usage	Description
task 3	task.ps1 3 [tbl] [id]	Fast	Read-only	None	None	Offline Catalog	Audits pending database migration SQL or scalps table entity details.
task 4	task.ps1 4 <sha>	Normal	Read-only	Advisory	None	None	Generates bounded AI semantic dossier with touched code and context lines.
task 5	task.ps1 5 <topic>	Normal	Read-only	Advisory	None	Offline Catalog	Native Turtle core specification auditor for missing custom features.
task 6	task.ps1 6 <id/query>	Fast	Read-only	None	None	Online DB API	Queries official Turtle Online DB viewer for item, spell, and creature tooltips.
task scalp	task.ps1 scalp <tbl> <id> [-Diff] [-Export]	Fast	Read-only	None	None	Brotalnia/Base	Extracts entity definitions and generates side-by-side vanilla vs Turtle diffs.
task extract	task.ps1 extract <tbl> <id>	Fast	Read-only	None	None	Brotalnia/Base	Alias for task scalp .
task restore	task.ps1 restore <topic> [-StageTemplate]	Normal	Staging	Advisory	None	Offline Catalog	Audits official staff posts and stages native core restoration manifests.
task restore-batch	task.ps1 restore-batch <N>	Normal	Staging	Advisory	None	Offline Catalog	Batch audits next \$N\$ un-audited Turtle patch topics from roadmap queue.
task status	task.ps1 status	Fast	Read-only	None	None	None	Displays live system metrics, queue counts, HEAD SHAs, and active run IDs.
task pdf	task.ps1 pdf	Fast	Read-only	None	None	None	Compiles COMMAND_REFERENCE.md to HTML and exports high-quality PDF via Edge.

5. Master Command Reference: Extended Engineering Commands

Command	Full Syntax	Mode	Access	AI Usage	Build Usage	DB Usage	Description
task test	task.ps1 test	Fast	Read-only	None	None	None	Executes comprehensive 38-case Pester test suite covering all invariants.
task prove	task.ps1 prove <sha>	Fast	Read-only	None	None	None	Deterministic bug prover inspecting diff hunks and target AST existence.
task relations	task.ps1 relations <sha>	Fast	Read-only	None	None	None	Analyzes commit reverts, duplicate fixes, and file overlap relationships.
task dependencies	task.ps1 dependencies <sha>	Fast	Read-only	None	None	None	Inspects git commit DAG for missing parents and prerequisite commits.
task rank	task.ps1 rank	Fast	Read-only	None	None	None	Computes 12-factor priority scores (0.0–100.0) across all pending candidates.
task next	task.ps1 next	Fast	Read-only	None	None	None	Returns the single highest-priority eligible candidate commit to port.
task plan	task.ps1 plan <sha> [-Mode M]	Variable	Read-only	None	None	None	Generates a complete verification plan and dry-run report without disk writes.
task build-profile	task.ps1 build-profile <sha>	Fast	Read-only	None	None	None	Selects optimal build target (world , auth , sql-only , playerbots).
task smoke	task.ps1 smoke [-Mode M]	Fast/Deep	Execute	None	Binary Test	None	Disposable server startup smoke test evaluating mangosd.exe & realmd.exe .
task crash	task.ps1 crash <path>	Fast	Read-only	None	None	None	Parses server crash dump / log, categorizes failure, and extracts stack frames.

Command	Full Syntax	Mode	Access	AI Usage	Build Usage	DB Usage	Description
task triage	task.ps1 triage <logfile>	Fast	Read-only	None	None	None	Categorizes log errors across 17 structured failure categories.
task baseline	task.ps1 baseline [-Force]	Fast	Read-only	None	Binary Test	None	Checks and caches compile, link, and startup health of target repository HEAD.
task state	task.ps1 state	Fast	Read-only	None	None	None	Outputs canonical pipeline state store summary and active run statistics.
task config-check	task.ps1 config-check	Fast	Read-only	None	None	None	Validates repository paths, toolchain binaries, and schema configuration.
task state-check	task.ps1 state-check	Fast	Read-only	None	None	None	Verifies state store integrity, active runs, and candidate transition history.
task worktree	task.ps1 worktree	Fast	Read-only	None	None	None	Lists all currently active and managed isolated Git worktrees.
task worktree-cleanup	task.ps1 worktree-cleanup [-DryRun]	Fast	Write (Worktree)	None	None	None	Safely purges obsolete or completed worktrees inside <code>.worktrees/</code> .
task parity	task.ps1 parity	Fast	Read-only	None	None	Offline DBC	Audits binary client DBCs (<code>ChrRaces</code> , <code>Map</code> , <code>Spell</code>) against server code.
task release-check	task.ps1 release-check	Fast	Read-only	None	None	Offline Catalog	Evaluates all release readiness gates (tree clean, invariants pass, baseline).
task release-manifest	task.ps1 release-manifest [name]	Fast	Write (Docs)	None	None	None	Generates a signed machine-readable release manifest in <code>docs/releases/</code> .
task tag-release	task.ps1 tag-release <name>	Fast	Write (Git Tag)	None	None	None	Gated Git tag creation; rejects release if any readiness gates fail.
task roadmap-refresh	task.ps1 roadmap-refresh [-FetchLatest]	Fast	Read/Write (Roadmap)	None	None	None	Audits all 7,300+ upstream commits, refreshes queue, and fetches latest commits.

6. Verification Modes: FAST vs NORMAL vs DEEP

The system provides three strictly defined verification modes. Each mode enforces all safety invariants, but varies in compilation scope, runtime validation depth, and AI assistance:

Verification Mode	Code Analysis	Invariant Scan	DB Schema Audit	Build Execution	Startup Smoke Test	Runtime Test	AI Consultation	Typical Duration
Fast	Deterministic diff matching	Full manifest invariant scan	Full 413-table column audit	Skipped	Skipped	Skipped	Skipped (Deterministic only)	1 – 3 seconds
Normal	Diff + Nearby context AST	Full manifest invariant scan	Full 413-table column audit	Patch-Aware (<code>world</code> / <code>auth</code>)	Disposable startup check	Optional / Smoke	Advisory (On ambiguity only)	30 – 90 seconds
Deep	Full call-graph & packet trace	Full manifest invariant scan	Full 413-table column audit	Full MSVC Solution	Full disposable smoke test	Reproducer verification	Advisory + Contextual trace	2 – 5 minutes

Mandatory Common Checks (Enforced Across ALL Modes):

- Deterministic Bug-Existence Proof:** Verification that the defect exists in target and was not previously fixed or intentionally diverged.
- Compatibility Invariant Scan:** Verifies `MAX_RACES = 11` , `sTWDebuff` , `SCRIPT_COMMAND_TAKE_MONEY = 93` , and protected manager hooks.
- Database Migration Safety Check:** Forbidden progressive versioning columns (`patch` , `build`) and custom ID boundaries (`spell_template` >= 40000, world templates >= 300000).
- Target Working Tree Cleanliness:** Main checkout is verified clean before worktree creation.

7. Automatic Mode Escalation Rules

The mode engine (`ModeEngine.ps1`) evaluates candidate risk factors. It automatically escalates execution modes to protect server integrity:

Fast $\rightarrow$ Normal Escalation Triggers:

- Candidate introduces or modifies SQL database migration files (`sql/database_updates/`).
- Candidate possesses one or more unresolved predecessor commit dependencies.
- Bug-existence confidence score is below \$0.85\$.
- Candidate modifies core spell mechanics (`SpellMgr.cpp` , `SpellEffects.cpp`).

Normal $\rightarrow$ Deep Escalation Triggers:

- Commit subject or diff touches security keywords: `crash` , `packet` , `opcode` , `thread` , `mutex` , `deadlock` , `leak` , `exploit` , `auth` , `crypto` .
- Touched files reside in security or networking subsystems (`src/shared/Auth/` , `src/game/WorldSocket.cpp` , `src/game/Opcodes.cpp`).
- Concurrency constructs are modified (locks, atomic variables, threading queues).

IMPORTANT

No Automatic Downgrade Policy Under no circumstances will an explicitly requested mode be automatically downgraded (e.g., `-Mode Deep` will never execute as `Normal` or `Fast`).

8. DryRun Mode & Safety Guarantees

Running any porting or cleanup command with `-DryRun` guarantees that **zero modifications** are written to the target repository or filesystem:

```
# Plan candidate 448df9ba0 without touching repository
task.ps1 port 448df9ba0 -DryRun
```

DryRun Guarantees:

- No Git branches created (`port/PORT-XXXX` is not created).
- No Git worktrees spawned (`.worktrees/` remains unchanged).
- No compiler or linker invocations executed.
- No database files modified.
- Outputs complete execution plan: Bug verdict, priority score, resolved mode, required build profile, and dependency links.

9. Auto-Pilot Mode & Autonomous Batch Processing

Auto-Pilot Mode enables hands-free, continuous candidate evaluation, bug proving, worktree provisioning, patch normalization, compatibility auditing, and candidate staging across multiple commits without manual per-commit intervention.

The One-Command End-to-End Pipeline

When you want an autonomous, zero-friction pipeline that takes upstream commits all the way to candidate branch commits in a single pass, use **Auto-Pilot Mode**:

```
# Auto-Pilot a batch of 10 candidates with automatic compilation and git commit:
task.ps1 auto-pilot 10

# Auto-Pilot with tier filter:
task.ps1 auto-pilot 10 -Tier 1
task.ps1 auto-pilot 10 1

# Auto-Pilot a specific single commit:
task.ps1 auto-port 448df9ba0
```

How the Chained Pipeline Works:

1. Forum & Mechanics Intelligence Scout (`Search-ForumArchive.ps1`):

- Automatically mines 22,155 indexed Turtle-WoW forum threads using keywords extracted from the commit subject. Identifies any related mechanics discussions, player bug reports, or staff statements.
2. **Database & Migration Safety Audit** (`Audit-DatabaseMigrations.ps1`):
- Checks whether the upstream commit touches SQL migrations. Inspects table definitions against the 413-table schema catalog, verifies Turtle custom ID ranges (creature >= 300,000, spell >= 40,000), checks for forbidden progressive columns, and stages any required SQL files into `tools/queue/staging_sql/`.
3. **AI Context Assembly & Semantic Dossier** (`Invoke-AiAudit.ps1`):
- Performs bounded diff context extraction, checks surrounding code ASTs, evaluates Turtle custom divergences (`MAX_RACES=11` , `sTWDebuff`), generates an AI audit dossier in `tools/queue/ai_dossiers/<sha>.md` , and packages the candidate into `tools/queue/02_ready_to_build/PORT-XXXX.json` .
4. **Isolated Worktree Builder & Committer** (`Build-ReadyPackages.ps1`):
- Creates an isolated git worktree (`.worktrees/candidate-PORT-XXXX`), applies the patch safely, enforces build profiles (`world` , `auth` , `sql-only`), compiles via MSVC 2022, and commits to a candidate branch with full provenance recorded in `tools/state/state_store.json` .

FAQ: Staging Mode vs Auto-Pilot Mode

Execution Command	Staged to Queue?	Automatically Compiled?	Automatically Committed?	Need follow-up build?
<code>task.ps1 port-batch 10</code>	Yes (<code>02_ready_to_build/</code>)	No	No	YES (Review first, then compile via <code>task.ps1 build-packages</code>)
<code>task.ps1 auto-pilot 10</code>	Yes	Yes (in worktree)	Yes (candidate branch)	NO (Fully automated in 1 command)
<code>task.ps1 port-batch 10 -AutoCommit</code>	Yes	Yes (in worktree)	Yes (candidate branch)	NO (Fully automated in 1 command)
<code>task.ps1 auto-port <sha></code>	Yes	Yes (in worktree)	Yes (candidate branch)	NO (Fully automated in 1 command)

NOTE

- Use `task.ps1 port-batch 10` when you want a **review step** (inspecting AI dossiers and patches in `tools/queue/02_ready_to_build/` before compiling). - Use `task.ps1 auto-pilot 10` (or `task.ps1 auto-port`) when you want a **hands-off single command** that finishes the entire process and commits verified candidate branches automatically.

Clean CLI Invocations (From Default Open Location / Any Directory)

You do **not** need to `cd` into the project repository. All modules dynamically resolve repository roots from `$PSScriptRoot` .

1. Direct Invocation from Windows Command Prompt (`cmd.exe`):

```
powershell.exe -ExecutionPolicy Bypass -File "C:\Users\Admin\AntigravityProfiles\Projects\twow project\tools\task.p
```

2. Direct Invocation from PowerShell (from `C:\Users\Admin>` or any path):

```
& "C:\Users\Admin\AntigravityProfiles\Projects\twow project\tools\task.ps1" auto-pilot 10
```

3. Permanent Global Setup via PowerShell `$PROFILE` (Recommended):

Run this once in PowerShell to make `task` globally accessible from any terminal:

```
if (!(Test-Path $PROFILE)) { New-Item -ItemType File -Path $PROFILE -Force | Out-Null }
Add-Content $PROFILE "`nfunction task { & 'C:\Users\Admin\AntigravityProfiles\Projects\twow project\tools\task.ps1'
```

Once added, open a new PowerShell prompt anywhere and simply type:

```
task auto-pilot 10
task status
task next
task roadmap-refresh
```

Running Auto-Pilot Mode: With Tier vs Without Tier

A. Running WITH Tier Specification:

When you want to focus exclusively on a specific severity or architectural domain:

```
# Port the next 10 Tier 1 candidates (Crashes, Leaks, Deadlocks, Exploits)
task.ps1 port-batch 10 -Tier 1 -Mode Normal

# Port the next 10 Tier 2 candidates (Combat Accuracy, Spells, Formulas)
task.ps1 port-batch 10 -Tier 2 -Mode Normal
```

B. Running WITHOUT Tier Specification:

When you omit the `-Tier` argument:

```
# Auto-Pilot without tier: ports the next 10 highest-value candidates
task.ps1 port-batch 10 -Mode Normal
```

How Does Auto-Pilot Choose Commits Without a Tier?

1. Natural Architectural Hierarchy in `CRUCIAL_COMMITTS_QUEUE.csv`:

The master queue is pre-sorted by architectural urgency: **Tier 1 (Crashes/Exploits)** $\rightarrow$ **Tier 2 (Combat/Spells)** $\rightarrow$ **Tier 3 (NPC/AI)** $\rightarrow$ **Tier 4 (Movement/Maps)** $\rightarrow$ **Tier 5 (General)**. Without a tier filter, Auto-Pilot processes strictly down this natural hierarchy.

2. Dynamic 12-Factor Priority Scoring Engine (`task rank` / `task next`):

In addition to tier order, every candidate is scored dynamically from \$0.0\$ to \$100.0\$ by `PriorityEngine.ps1`:

- Crash Severity: \$+25\$ points
- High Player Impact: \$+20\$ points
- Security / Exploit Risk: \$+20\$ points
- Low Target File Churn: \$+15\$ points
- Dependency Satisfaction: \$+10\$ points
- Baseline Stability: \$+10\$ points
- Non-Applicable / Intentional Divergence: **\$0.0\$ score hard gate** (instantly skipped).

You can inspect this ranking at any time with `task rank` or retrieve the single best candidate with `task next`.

3. State Store & Git History Deduplication:

Auto-Pilot automatically cross-references `tools/state/state_store.json` and the target `tortoise-wow` git history. Any candidate that has already been evaluated (`ALREADY_FIXED` , `NOT_APPLICABLE` , `TURTLE_INTENTIONAL_DIVERGENCE` , `PACKAGE_READY` , or `RELEASED`) is **automatically bypassed**, ensuring zero redundant work.

The Recommended 3-Phase Auto-Pilot Runbook

To run Auto-Pilot with 100% safety and predictability:

```
# Phase 1: Pre-Flight DryRun (Evaluates bug prover and outputs plan without writing files)
task.ps1 port-batch 10 -DryRun

# Phase 2: Isolated Autonomous Porting (Runs in .worktrees/PORT-XXXX/ with safety checks)
task.ps1 port-batch 10 -Mode Normal

# Phase 3: Single-Writer Candidate Build & Branch Commit
task.ps1 1
```

Auto-Pilot Safety Guarantees:

- **Zero Working Tree Contamination:** All patch application and test compilation occur strictly in `.worktrees/PORT-XXXX/`. The main repository working tree remains 100% untouched.
- **Stale Package Auto-Invalidation:** If the target repository HEAD advances during a batch run, any staged package whose pinned base SHA does not match is automatically invalidated.
- **Non-Destructive Rollback:** If a patch fails compilation or invariant checks, the isolated worktree is safely deleted without ever executing `git reset --hard` or `git checkout ..`

10. Roadmap Research, Commit Auditing & Catching New Upstream Commits (`task roadmap-refresh`)

The upstream VMaNGOS repository (`vmangos/core`) continuously accepts new bugfixes and accuracy patches. The orchestration framework includes an automated research and auditing engine to catch, classify, and queue these new commits:

```
# Audit all local upstream commits and regenerate the roadmap
task.ps1 roadmap-refresh

# Fetch new commits from GitHub upstream remote, merge development, and audit
task.ps1 roadmap-refresh -FetchLatest
```

How the Roadmap List Refreshes:

1. **Upstream Remote Fetch (`-FetchLatest`):** When `-FetchLatest` is passed, the engine runs `git fetch origin` and `git merge --ff-only origin/development` inside `reference-upstreams/vmangos-core`, pulling down all new upstream commits.
2. **Donor Commit Scanning:** Scans all 7,300+ upstream commits in repository history (newest to oldest).
3. **Cross-Referencing Port History:** Compares every upstream commit SHA against commits already merged into `tortoise-wow` and documented in `docs/BACKPORT_HISTORY.md`.
4. **Older Superseded Duplicate Elimination:** Detects intermediate or superseded fixes and removes older duplicates so only modern final fixes are queued.
5. **Architectural Tier Classification:** Automatically assigns each commit to Tier 1 through Tier 5 based on modified subsystems and commit subjects.
6. **Artifact Generation:**
 - Updates `tools/porting/CRUCIAL_COMMITS_QUEUE.csv` (the active queue of 5,092 deduplicated crucial candidates).
 - Updates `tools/porting/ALL_AVAILABLE_COMMITS_REFERENCE.csv` (complete 7,339-commit catalog).
 - Re-renders `docs/ROADMAP.md` with updated metrics and live backlog status.

11. Build Profiles & Compiler Toolchain

The build engine (`BuildEngine.ps1`) optimizes build times by targeting only the solution components touched by the candidate patch:

Build Profile	Affected Subsystems	MSVC Target Project	Typical Compile Time
world	src/game/ , src/scripts/	mangosd	~45 seconds
auth	src/realmd/ , src/shared/Auth/	realmd	~15 seconds
sql-only	sql/ , documentation	None (Bypasses compilation)	Instant (0s)
playerbots	src/game/playerbot/	mangosd (PlayerBots profile)	~45 seconds

Build Profile	Affected Subsystems	MSVC Target Project	Typical Compile Time
docs-only	docs/ , tools/	None	Instant (0s)

12. Baseline Health Check & SHA Pinning

The baseline checker (`BaselineChecker.ps1`) verifies the compile, link, and startup state of the unchanged target repository before applying candidate patches:

```
task.ps1 baseline
```

- **Cached Baseline:** Once verified for a target HEAD SHA, baseline status is cached in `tools/state/state_store.json`.
- **Three-Tier Classification:**
 - `COMPILE_FAIL` : Target source fails compilation prior to patch.
 - `LINK_FAIL` : Compilation passes, but linker errors occur.
 - `STARTUP_FAIL` : Binary links, but crashes on startup (e.g. missing DBC or DB config).
 - `HEALTHY` : Compile, link, and startup all succeed.

13. Bug-Existence Proving Engine

The bug prover (`BugProver.ps1`) executes deterministic analysis before any candidate is ported:

```
task.ps1 prove 448df9ba0
```

Deterministic Verdicts:

- `BUG_PRESENT` : Target source file contains the exact unpatched code pattern or cleanly applicable bug signature.
- `ALREADY_FIXED` : Target source already contains the upstream fix or equivalent logic from previous commits.
- `NOT_APPLICABLE` : Commit modifies files or subsystems that do not exist in Tortoise-WoW.
- `TURTLE_INTENTIONAL_DIVERGENCE` : Target code intentionally diverges from vanilla (e.g., custom race handling, debuff engine).
- `UNCERTAIN` : Context has diverged significantly; requires manual or advisory AI review.

14. Database Safety, Schema Catalog & Provenance

Database migrations undergo rigorous automated static analysis against `config/schema_catalog.json` (413 verified tables):

```
task.ps1 3 "sql/database_updates/world/20260507165648_world.sql"
```

Enforced Rules:

1. **Forbidden Progressive Columns:** Rejects any statement containing `patch` , `build` , `min_patch` , or `max_patch` .
2. **Custom Spell Boundary Protection:** `spell_template` IDs `$\ge 40000$` are reserved for Turtle-WoW custom spells. Modifications to these IDs trigger a validation failure.
3. **Custom World Entity Protection:** `creature_template` , `item_template` , `quest_template` , and `gameobject_template` IDs `$\ge 300000$` are reserved for Turtle custom content.
4. **Statement Anchoring:** Parser anchors table matching (`(?m)^\s`) to prevent false positives from quest text strings like "update my count"*.
5. **Entity Provenance Tracking:** Records source donor revision, target entity ID, original value, proposed value, and confidence rating in structured dossiers.

15. DBC, Client & Core Parity Auditor

The parity auditor (`ParityAuditor.ps1`) parses binary WDBC client data from `reference-upstreams/client-data-1.18.1/dbc` and verifies server constants:

```
task.ps1 parity
```

- **ChrRaces.dbc**: Verifies playable race records against `#define MAX_RACES 11` in `SharedDefines.h`.
- **Map.dbc**: Audits 57 map definitions against server map enum declarations.
- **Spell.dbc**: Verifies custom spell entry boundary rules.
- **ItemClass.dbc**: Verifies item classification bitmasks.

16. Crash Dump & Server Log Triage

Automated triage engine (`TriageEngine.ps1`) categorizes runtime issues and crash dumps across 17 distinct failure categories:

```
# Triage server startup or runtime log
task.ps1 triage "tortoise-wow/bin/Release/Server.log"

# Triage crash dump or assertion trace
task.ps1 crash "tortoise-wow/bin/Release/crash.dmp"
```

Supported Failure Classifications:

`ASSERTION_FAILURE` , `SEGMENTATION_FAULT` , `DATABASE_ERROR` , `DBC_ERROR` , `OPCODE_ERROR` , `MAP_LOAD_ERROR` , `SPELL_ERROR` , `SCRIPT_ERROR` , `NETWORK_ERROR` , `CONFIG_ERROR` , `AUTH_ERROR` , `MEMORY_LEAK` , `DEADLOCK` , `STARTUP_TIMEOUT` , `SHUTDOWN_HANG` , `CUSTOM_SYSTEM_ERROR` , `UNKNOWN_FAILURE` .

17. Worktree Isolation & Cleanup Management

All candidate modifications are strictly isolated to Git worktrees:

```
# View all managed active worktrees
task.ps1 worktree

# Safe cleanup of merged or obsolete worktrees
task.ps1 worktree-cleanup
```

Isolation Rules:

- Located exclusively in `<TargetRepo>/worktrees/PORT-XXXX/` .
- Rooted on ephemeral branch `port/PORT-XXXX-<sha>` .
- Pruned cleanly using `git worktree remove` upon pipeline completion or rejection.
- Safety check prevents deletion of any directory outside `.worktrees/` .

18. Run IDs, Idempotency & Resumption

Every pipeline execution generates a unique, sortable Run ID:

```
RUN-yyyyMMdd-HH:mm:ss-xxxx (e.g., RUN-20260909-144022-7a1b)
```

- **Idempotent Resumption**: State store (`tools/state/state_store.json`) tracks active runs and stage transitions.
- Interrupted runs resume from the last certified state without re-running deterministic proofs.

19. Canonical 30-State Machine

Candidates transition through a strictly guarded 30-state lifecycle:

State	Category	Description	Allowed Next States
<code>DISCOVERED</code>	Initial	Candidate identified from upstream donor commit	<code>TRIAGED</code> , <code>BUG_PROOF_PENDING</code> , <code>ALREADY_FIXED</code> , <code>NOT_APPLICABLE</code> , <code>REJECTED</code>
<code>TRIAGED</code>	Priority	Categorized and scored by Priority Engine	<code>BUG_PROOF_PENDING</code> , <code>ALREADY_FIXED</code> , <code>NOT_APPLICABLE</code> , <code>TURTLE_INTENTIONAL_DIVERGENCE</code> , <code>REJECTED</code>

State	Category	Description	Allowed Next States
BUG_PROOF_PENDING	Proving	Undergoing deterministic diff & AST analysis	BUG_PRESENT , ALREADY_FIXED , NOT_APPLICABLE , TURTLE_INTENTIONAL_DIVERGENCE , UNCERTAIN
BUG_PRESENT	Verified Defect	Bug proved present in target source	DEPENDENCY_PENDING , DEPENDENCY_READY , DB_CHECK_PENDING , ADAPTATION_REQUIRED , PATCH_READY
ALREADY_FIXED	Terminal Clean	Upstream fix is already present in target	NEEDS_REAUDIT
NOT_APPLICABLE	Terminal Clean	System/file not present in target architecture	NEEDS_REAUDIT
TURTLE_INTENTIONAL_DIVERGENCE	Guarded	Target intentionally behaves differently	HUMAN_REVIEW_REQUIRED , REJECTED , NEEDS_REAUDIT
UNCERTAIN	Ambiguous	Cannot prove deterministically	HUMAN_REVIEW_REQUIRED , ADAPTATION_REQUIRED , REJECTED
DEPENDENCY_PENDING	Dependency	Waiting for predecessor commit to be ported	DEPENDENCY_READY , HUMAN_REVIEW_REQUIRED , REJECTED
DEPENDENCY_READY	Dependency	All required predecessor commits satisfied	DB_CHECK_PENDING , ADAPTATION_REQUIRED , PATCH_READY
DB_CHECK_PENDING	Database	Undergoing schema catalog and column audit	DB_CHECK_PASS , DB_CHECK_FAIL
DB_CHECK_PASS	Database	Schema valid, no forbidden columns, no collisions	ADAPTATION_REQUIRED , PATCH_READY
DB_CHECK_FAIL	Database	Invariant violation or column collision detected	ADAPTATION_REQUIRED , HUMAN_REVIEW_REQUIRED , REJECTED
ADAPTATION_REQUIRED	Adaptation	Requires code adjustment for Turtle custom systems	PATCH_READY , HUMAN_REVIEW_REQUIRED , REJECTED
PATCH_READY	Staged	Patch cleanly formatted and ready for isolated build	COMPILE_PENDING , REJECTED
COMPILE_PENDING	Build	Worktree created; queued for compilation	COMPILE_PASS , COMPILE_FAIL , BLOCKED_BY_BASELINE
COMPILE_PASS	Build	MSVC compilation succeeded with 0 errors	STARTUP_PENDING , RUNTIME_PENDING , COMPLETE
COMPILE_FAIL	Build	MSVC compilation failed	BLOCKED_BY_BASELINE , ADAPTATION_REQUIRED , HUMAN_REVIEW_REQUIRED , REJECTED
STARTUP_PENDING	Smoke Test	Binary launched in disposable environment	STARTUP_PASS , STARTUP_FAIL , BLOCKED_BY_BASELINE
STARTUP_PASS	Smoke Test	Binary initialized cleanly without crashes	RUNTIME_PENDING , COMPLETE , HUMAN_REVIEW_REQUIRED
STARTUP_FAIL	Smoke Test	Binary crashed or asserted on startup	BLOCKED_BY_BASELINE , ADAPTATION_REQUIRED , REJECTED
RUNTIME_PENDING	Runtime	Queued for in-game reproducer verification	RUNTIME_PASS , RUNTIME_FAIL
RUNTIME_PASS	Runtime	In-game behavior matches vanilla specification	COMPLETE , HUMAN_REVIEW_REQUIRED
RUNTIME_FAIL	Runtime	In-game reproducer failed	ADAPTATION_REQUIRED , HUMAN_REVIEW_REQUIRED , REJECTED
HUMAN_REVIEW_REQUIRED	Approval Gate	Ambiguous fix flagged for human decision	HUMAN_APPROVED , HUMAN_REJECTED
HUMAN_APPROVED	Approval Gate	Human operator certified fix for inclusion	PATCH_READY , COMPILE_PENDING , COMPLETE
HUMAN_REJECTED	Approval Gate	Human operator rejected fix	REJECTED
BLOCKED_BY_BASELINE	Baseline Block	Blocked because unchanged target HEAD is broken	NEEDS_REAUDIT , REJECTED
NEEDS_REAUDIT	Invalidation	Invalidated due to target HEAD moving or staleness	BUG_PROOF_PENDING , TRIAGED , DISCOVERED
COMPLETE	Final Pass	Certified, tested, committed to candidate branch	NEEDS_REAUDIT
REJECTED	Final Fail	Rejected candidate permanently archived	NEEDS_REAUDIT

20. CI / GitHub Actions PR Workflows

Two GitHub Actions workflows automate continuous integration across orchestration tools and candidate server builds:

1. `.github/workflows/orchestration-ci.yml`:
 - Runs on every push and pull request touching `tools/`, `config/`, or `docs/`.
 - Executes `task test` (Pester 38-case test suite).
 - Validates JSON schema contracts (`config/schemas/`).
 - Runs configuration health check (`task config-check`).
 - Verifies command reference and PDF generation.
2. `.github/workflows/server-candidate-ci.yml`:
 - Triggered when candidate port branches (`port/*`) are pushed.
 - Sets up MSVC 2022 toolchain and Ninja build system.
 - Runs baseline validation against target base commit.
 - Executes patch-aware compilation profile.
 - Uploads build logs and triage reports as artifacts.

21. Release Checkpoints & Manifest Generation

Release commands provide certification gates before tagging or publishing server releases:

```
# Evaluate release readiness gates
task.ps1 release-check

# Generate certified release manifest
task.ps1 release-manifest "Release-1.18.1-Update1"

# Create signed git tag (aborts if readiness gates fail)
task.ps1 tag-release "v1.18.1-update1"
```

- Manifests are saved to `docs/releases/<name>.json` with full commit SHAs, toolchain info, and test certifications.

22. Critical Safety Warnings

CAUTION

1. **Single-Writer Constraint:** Never invoke `-AutoBuild` or compiler tasks concurrently in multiple shells. 2. **Never Commit Directly to Extended Main:** Candidate fixes must be isolated to candidate branches (`port/PORT-XXXX-<sha>`). 3. **Never Touch Working Tree:** Never execute `git checkout .`, `git reset --hard`, or `git clean -fd` in `tortoise-wow`. 4. **No Secrets in Logs:** Never print or commit API keys, authentication tokens, or private user passwords.

23. Troubleshooting & Common Failure States

Error Code / Symptom	Root Cause	Solution
EXIT CODE 1: MAX_RACES invariant violation	Candidate patch alters <code>MAX_RACES</code> or loop bound.	Restore <code>#define MAX_RACES 11</code> in patch; adapt race array allocations.
EXIT CODE 1: Custom ID boundary collision	Patch uses <code>spell_template</code> entry <code>\$\ge 40000\$</code> or world entry <code>\$\ge 300000\$</code> .	Renumber entity to vanilla range (<code>\$< 40000\$</code> or <code>\$< 300000\$</code>) or scalp correct ID.
EXIT CODE 1: Target repository has uncommitted changes	Working tree is dirty; worktree isolation safety triggered.	Commit or stash changes in <code>tortoise-wow</code> before running porting commands.
EXIT CODE 2: Microsoft Edge not found	Edge binary missing at standard 32/64-bit location.	Verify installation of Edge or update path in <code>Export-CommandReferencePdf.ps1</code> .
EXIT CODE 2: CMake executable not found	<code>cmake.exe</code> not detected in PATH or vcpkg tools directory.	Run <code>task config-check</code> to verify auto-discovery or update <code>config/twow-project.json</code> .
STALE PACKAGE: Target base SHA mismatch	Target repo HEAD advanced since package was staged.	Re-audit candidate via <code>task port <sha></code> against new target HEAD.

24. Expected Status & Verdict Reference Values

Category	Canonical Allowed Values	Meaning
Pipeline Status	PASS , FAIL , WARN , SKIPPED , BLOCKED	Stage execution result code
Bug Verdict	BUG_PRESENT , ALREADY_FIXED , NOT_APPLICABLE , TURTLE_INTENTIONAL_DIVERGENCE , UNCERTAIN	Bug prover determination
Verification Mode	Fast , Normal , Deep	Verification intensity level
Build Profile	world , auth , sql-only , playerbots , docs-only	Selected MSVC build target
AI Usage	NONE , ADVISORY_ONLY , AMBIGUITY_SYNTHESIS	AI role in candidate evaluation
Exit Codes	0 (PASS), 1 (VALIDATION_FAIL), 2 (TOOL_FAIL), 3 (SCHEMA_FAIL)	Process return codes

25. Architectural Strengths & Engineering Guarantees

The build and porting automation architecture provides a high-assurance, non-destructive, enterprise-grade engineering framework:

Architectural Dimension	Modern Autonomous Implementation	Tangible Engineering Guarantee
Git Working Tree Safety	Strict Git worktree isolation in ephemeral <code>.worktrees/candidate-PORT-XXXX/</code> .	Target repo checkout is 100% clean and immune to accidental corruption or debris.
Rollback & Cleanup	Non-destructive: simply unlinks the worktree (<code>Remove-IsolatedWorktree</code>).	Eliminates catastrophic data loss risk; never discards uncommitted work.
Commit Staging & Branches	Changes committed exclusively to candidate branches (<code>port/PORT-XXXX-<sha></code>).	Enables clean PR reviews, branch audits, and CI smoke testing before integration.
Bug Existence Verification	Deterministic Bug Prover (<code>BugProver.ps1</code> / <code>task prove</code>).	Classifies <code>BUG_PRESENT</code> , <code>ALREADY_FIXED</code> , <code>NOT_APPLICABLE</code> , or <code>TURTLE_DIVERGENCE</code> before touching code.
Build Efficiency	Patch-Aware Build Profiles (<code>world</code> , <code>auth</code> , <code>sql-only</code> , <code>docs-only</code>).	Bypasses compilation for SQL/docs (0s), targets single daemons (15-45s), maximizing iteration speed.
Database Migration Safety	Cached 413-table schema catalog (<code>DbAuditor.ps1</code>) and strict boundary guards.	Blocks forbidden progressive columns (<code>patch</code> , <code>build</code>) and protects custom ranges (<code>spell</code> \$ge 40k\$, world \$ge 300k\$).
Client Data Parity	Automated binary WDBC parser (<code>ParityAuditor.ps1</code> / <code>task parity</code>).	Guarantees code parity with 1.18.1 client DBCs (<code>MAX_RACES = 11</code> , maps, spell definitions).
State Tracking & Resumption	Atomic canonical JSON state store (<code>state_store.json</code>) with 30-state transition guards.	Deterministic run IDs (<code>RUN-yyyyMMdd-HHmss-xxxx</code>), transition guards, and resume capability.
AI Token Efficiency	Deterministic-first gating, bounded context (\$\le 200\$ lines), composite SHA256 caching.	0 AI tokens spent on deterministic rejections; prevents hallucination via <code>ADVISORY_ONLY</code> .
Runtime Reliability	Disposable startup smoke tests (<code>SmokeTest.ps1</code>) and 17-category log triage.	Catches assertion failures, heap corruptions, and missing DBCs before candidate commits are certified.
Automated Testing & CI	Comprehensive 38-spec test suite (<code>task test</code>) + 2 GitHub Actions CI workflows.	Sub-7-second automated verification ensuring every invariant, schema, and command passes.

26. Daily Cheat Sheet & Top Fast Commands

This quick-reference cheat sheet summarizes the most frequent commands you will run on a day-to-day basis.

26.1. The Top Commands at a Glance

Command	Full Syntax	Primary Purpose	When to Use
Batch Auto-Pilot	<code>task auto-pilot 10</code>	Full autonomous pipeline: lore scouting, DB audit, AI context dossier, MSVC worktree compile, and candidate branch commit for 10 commits.	Your primary hands-free daily command for high-velocity porting.
Tier-Filtered Auto-Pilot	<code>task auto-pilot 10 1</code>	Same end-to-end auto-pilot pipeline, but restricted strictly to Tier 1 (Crash, Exploit, and Critical Security fixes).	When focusing specifically on server stability, security, or crash elimination.
Batch Auto-Commit	<code>task port-batch 10 -AutoCommit</code>	Equivalent to <code>task auto-pilot 10</code> . Runs all research stages (lore, DB audit, AI context) and triggers the MSVC compile & commit gate.	Exact semantic alias for batch auto-pilot.
Single Auto-Port	<code>task auto-port <sha></code>	One-command end-to-end port, compile, and commit for a single specific upstream commit SHA.	When investigating or porting a specific upstream commit SHA directly.

Command	Full Syntax	Primary Purpose	When to Use
Refresh Upstream Roadmap	<code>task roadmap-refresh - FetchLatest</code>	Connects to upstream <code>vmangos/core</code> , fetches the latest commits, audits against Turtle core, recalculates priority scores, and updates <code>docs/ROADMAP.md</code> .	Weekly or when new upstream commits are released and you want to catch them.
Offline Roadmap Audit	<code>task roadmap-refresh</code>	Re-evaluates and ranks all cached candidate commits offline without network requests.	When re-ranking local candidates or updating queue files offline.
Compile Server	<code>task build</code> (or <code>task build world</code>)	Directly invokes CMake / MSVC 2022 to build the target server daemon (<code>world</code> , <code>auth</code> , <code>sql-only</code> , <code>playerbots</code>).	To verify current core builds cleanly without running the porting pipeline.
Run All Unit Tests	<code>task test</code>	Runs the universal 38-spec automated Pester test suite in under 7 seconds.	Before and after any major tooling or policy change.
Prove Bug Existence	<code>task prove <sha></code>	Deterministically proves whether a bug exists in Tortoise-WoW Extended without modifying any code.	Quick triage to see if an upstream fix is already fixed or applicable.
Pipeline Status	<code>task status</code>	Outputs current target Git HEAD, active worktree count, staged ready packages, and active run IDs.	Anytime you want a rapid health check of the engineering environment.
Entity Scalp & Diff	<code>task scalp <table/type> <id> - Diff</code>	Extracts item, NPC, spell, or quest records from historical database, strips progressive columns, and generates sanitized SQL diff.	When fixing or verifying custom database entities against vanilla data.
Worktree Cleanup	<code>task cleanup</code>	Safe, non-destructive disposal of ephemeral <code>.worktrees/candidate-*</code> directories.	Periodic cleanup after large batch runs; leaves working tree 100% clean.
Regenerate PDF & HTML	<code>task pdf</code>	Converts <code>COMMAND_REFERENCE.md</code> into cleanly formatted <code>COMMAND_REFERENCE.html</code> and publication-ready <code>COMMAND_REFERENCE.pdf</code> .	Whenever documentation or command specifications are updated.

26.2. Clean CLI Invocations (From Default Location / Any Prompt)

You do not need to change directory (`cd`) to run any of these commands. You can execute them directly from

`C:\Users\Admin>` or any terminal:

In PowerShell:

```
# 1. Run 10 commits through auto-pilot
& "C:\Users\Admin\AntigravityProfiles\Projects\twow project\tools\task.ps1" auto-pilot 10

# 2. Run 10 Tier-1 (critical crash/exploit) commits through auto-pilot
& "C:\Users\Admin\AntigravityProfiles\Projects\twow project\tools\task.ps1" auto-pilot 10 1

# 3. Batch port 10 commits with immediate compilation and commit
& "C:\Users\Admin\AntigravityProfiles\Projects\twow project\tools\task.ps1" port-batch 10 -AutoCommit

# 4. Fetch latest upstream commits and refresh roadmap
& "C:\Users\Admin\AntigravityProfiles\Projects\twow project\tools\task.ps1" roadmap-refresh -FetchLatest

# 5. Compile server world daemon
& "C:\Users\Admin\AntigravityProfiles\Projects\twow project\tools\task.ps1" build world

# 6. Run test suite
& "C:\Users\Admin\AntigravityProfiles\Projects\twow project\tools\task.ps1" test
```

In Windows Command Prompt (`cmd.exe`):

```
:: Run 10 commits through auto-pilot
powershell.exe -ExecutionPolicy Bypass -File "C:\Users\Admin\AntigravityProfiles\Projects\twow project\tools\task.p

:: Fetch latest upstream commits and refresh roadmap
powershell.exe -ExecutionPolicy Bypass -File "C:\Users\Admin\AntigravityProfiles\Projects\twow project\tools\task.p

:: Run test suite
powershell.exe -ExecutionPolicy Bypass -File "C:\Users\Admin\AntigravityProfiles\Projects\twow project\tools\task.p
```

26.3. Target Repository Authority & Local Workspace Guarantees

IMPORTANT

Repository Authority & Target Server: - **Sole Server Target:** All ported fixes, investigations, and compiled commits target **Ildourol/tortoise-wow-extended** exclusively. - **Local Toolchain Execution:** All automation scripts, analysis engines, and state trackers operate strictly locally on this machine with zero remote orchestration repository connections.
